### What is Dual Function?

Most double euro cylinders can only be operated from one side at a time. So if you leave a key in one side of the cylinder you can't open the lock from the other side. Which can lead to being locked out!

Dual Function cylinders operate from both sides independantly which allows the inside key or removable snib to be kept in the inside for easy access when you are at home. You wouldn't want to be searching for your keys to get out the door in the even of a fire would you?

Insurance Company Compliance is also another great feautre of Dual Function cylinders by simply removing the inside key or snib when you're not at home.
